

Strizo cast floors are self-levelling floor systems composed of high-quality binding agent and inert fillers. The basic cast floor provides a smooth and polished finish in standard layers of approx. 1 mm and up. (Strizo EP 422).

Strizo cast floor systems offer a fluid-tight finish according to CUR Recommendation 44. If required, Comosil will be happy to assist you in certifying your floor finish and

obtaining the required PBV (Soil Protection Facilities Plan) statement.

The various processing options make it possible to adapt the character of the floor to your personal preferences. For example, you can give the floor a terrazzo finish by scattering deco chips. Strizo cast floor systems are available in a high-gloss, matt or satin finish. Non-skid layers are also available.

Applications:

Strizo epoxy cast floors:

Thanks to its extreme resistance to mechanical wear and chemical stresses, this cast floor is popular as a wear-resistant and/or fluid-tight finish in heavy-duty environments. Specific applications include garage workshops, printers' workshops, warehouses, DIY centres, production halls in the metal processing, chemical and food industries, storage sites for chemical waste, etc.

Strizo polyurethane cast floors:

The (adjustable) flexible and low-noise properties make this cast floor highly suitable for decorative applications in exhibition halls, foyers, kindergartens, classrooms, meeting rooms, hospitals and prisons, public spaces in utility buildings, etc. as well as for specific chemical loads. Strizo polyurethane floor systems are available in colourfast versions (Strizo PU 50 NV).

System options

Below are some examples of systems. However, as each floor is different and each load requires different properties, please apply for custom-made floor advice.

EPOXY:

Not sealed:

Strizo EP 110
Strizo EP 422

With colour sealing:

Strizo EP 110
Strizo EP 422
