

Flooring technology is in a constant state of flux. Once again, Strizo stands out from its competitors both in terms of quality and practical applicability. Marble is a soft and porous material in splendid colours

designed by nature itself. At Comosil, natural marble is made impermeable in a high-pressure impregnation process to eliminate the porosity of the material.

The benefits of Strizo Marmmerstone compared with untreated marble:

- Stronger and more wear-resistant
- Very easy to clean
- All of the binder content is used for gluing the system components
- Easier to install than untreated Marmmerstone
- Standard 3-year guarantee

### Outdoor applications:

In combination with the binding agent STRIZO PU 250, Strizo Marmmerstone is the first COLOURFAST product in its category available on the market, specially developed for outdoor applications.

**Strizo Marmmerstone**

Strizo Marmmerstone has undergone high-pressure impregnation treatment, which helps to prevent the creation of dust during practical applications and greatly increases the strength of the final floor (+10%)

Strizo EP 220 binder content 8%

Strizo PU 250 binder content 5%

Compression strength NEN 3072 approx. 22 N/mm<sup>2</sup>

Compression strength NEN 3072 approx. 21 N/mm<sup>2</sup>

Bending strength NEN 3072 approx. 6,7 N/mm

Bending strength NEN 3072 approx. N/mm<sup>2</sup>

**Non-sealed varieties, Forte:**

Strizo EP 110

Strizo Marmmerstone + Strizo EP 220

Top coating Strizo PU 3000

**Sealed variety:**

Strizo EP 110

Strizo Marmmerstone + Strizo EP 220

Sealing Strizo EP gel

**Outdoor applications:**

Strizo EP 110

Strizo Marmmerstone + Strizo PU 250
